

My husband is a long haul truck driver and having access to the weather and traffic is very important to his business. it saves him time and money by not sitting in long traffic jams while burning extra fuel. He can get the traffic and weather before he ever gets into range of local radio stations with XM so he is able to plan his trip or even reroute his trip if necessary. This helps keep smog and pollution down and also less chance of accidents with less vehicles on the road during bad traffic. So please keep XM weather and traffic info on the air.
